Numpy & Panda

→ Numpy and pandas are libraries which have built in functions.

Steps for AI project

collect the data → process data → train model → test model
→ deploy model

→ Numpy

→ Numerical python used for performing fast numerical and mathematical operations on large datasets

→ Stores data in arrays

→ Used to ~~and~~ create and manipulate arrays efficiently

→ Multidimensional array

```
a = [1, 2, 3, 4, 5]
```

```
arr = np.array(a)
```

```
print(arr)
```

```
→ [1 2 3 4 5]
```

```
[Pip install numpy  
import numpy as np]
```

```
type(arr)
```

```
#numpy.ndarray
```

```
arr2d = np.array([[1, 2, 3], [4, 5, 6]])
```

```
print(arr2d)
```

```
// [[1, 2, 3]
```

```
    [4, 5, 6]]
```
